## Mi primer TDD 2.0 Álvaro Serrano Martínez

Creamos un nuevo proyecto en eclipse y creamos una clase llamad a *TestsCoche*, ahora ponemos @Test y creamos el método

test\_al\_crear\_un\_coche\_su\_velocidad\_inicial\_es\_ce ro

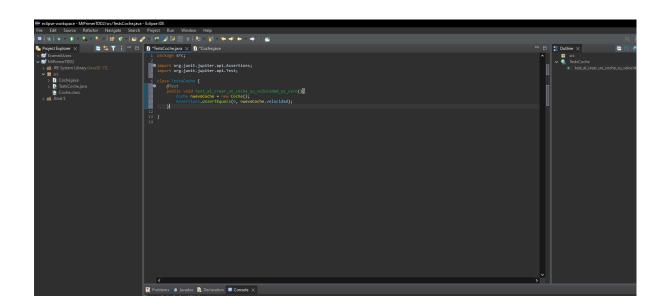

Creamos la clase Coche con el atributo velocidad

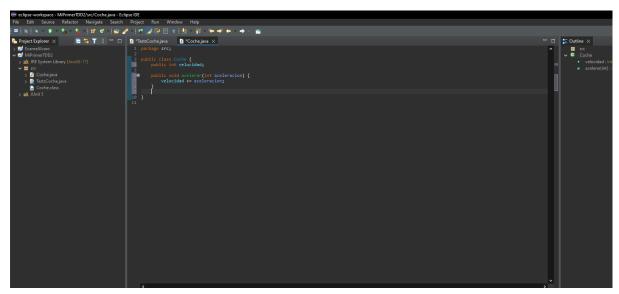

## En el método

test\_al\_crear\_un\_coche\_su\_velocidad\_inicial\_es\_ce
ro creamos un nuevo coche y con

**Assertions.assertEquals** comprobamos que al crear un coche su velocidad sea 0

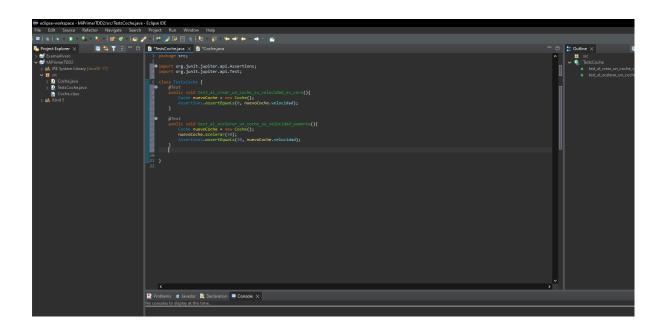

En la clase **Coche** creamos el método *acelerar* el cual suma a la velocidad la aceleración

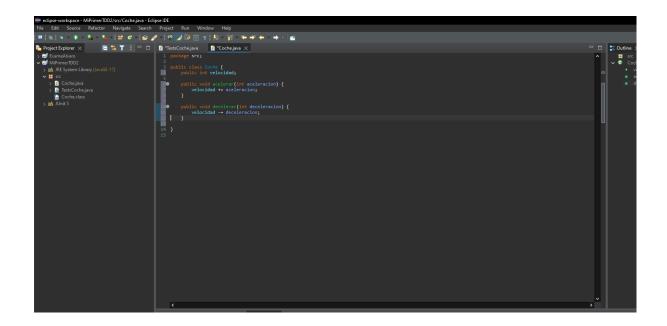

Después creamos el método

test\_al\_acelerar\_un\_coche\_su\_ velocidad aumenta
de la misma forma que el método anterior poniendo que
el coche nuevo acelere a 30

Creamos el método *decelerar* en la clase **Coche** de la misma forma que el método *acelerar* 

Ahora creamos el método

test\_al\_decelerar\_un\_coche\_su\_
velocidad\_disminuye que comprueba cuando
disminuye la velocidad del coche nuevo

```
## Source Marketon Maringhos Sarab Price of Maringhos Maringh
```

## Comprobamos que no funciona

```
| Figure | F
```

Tenemos que ir al método *decelerar* y poner que si la **velocidad** es menor que 0 que sea 0

```
